

FormPattern Two ColorTM

by Donald Tarallo and Alex Tarallo

Description & keyboard equivalents

FormPattern Color Two is a dingbat font for creating borders, frames, lines, and patterns. It is made up of a versatile set of interconnectable shapes that can flow together to make lines, borders, and patterns. Try different letter spacing to connect the forms into a continuous pattern or to space them apart. Explore leading (line spacing) to create large areas of pattern. Work with layering and opacity to discover the color-mixing potential of this font. Web designers can use FormPattern to make unique horizontal rules.

How does FormPattern work? Install is as a regular font and as you type you will get forms instead of letters. Most design software, such as Illustrator, InDesign, and Photoshop provide a glyphs palette where you can select the precise form you want. Alternatively, you can refer to the following pages here, which display the forms and their equivalents on the keyboard.

FormPattern Color Two is a vector-based and fully scalable SVG OpenType format. Color fonts are supported by Photoshop 2017, Illustrator 2018, and QuarkXPress 2018 (and later versions). A solid uncolored font comes with every purchase and can be used in applications that do not support color fonts. It will appear black and can be colored in the usual ways.

Those who previously bought the FormPattern non-colored set (2017 release) will find this updated version to have a few different keystroke equivalents and a different overall size.

The text in this document is set in **Binario** and is available from Tarallo Design at the same vendor that offers FormPattern Color.
