## Samples of weights and italics

Typefaces are a bit like actors. They have a face and a voice of their own, yet the way in which we perceive them depends greatly on the way they are used: their context, their mise-en-scène, the text they are given to embody.

Typefaces are a bit like actors. They have a face and a voice of their own, yet the way in which we perceive them depends greatly on the way they are used: their context, their mise-en-scène, the text they are given to embody.

Typefaces are a bit like actors. They have a face and a voice of their own, yet the way in which we perceive them depends greatly on the way they are used: their context, their mise-en-scène, the text they are given to embody.

Italics are style-linked in all weights, allowing for shortcuts to be used for activating them. Cmd/Ctrl (+ Shift) + i

*Typefaces are a bit like actors. They have a face and a voice of their own, yet the way in which we perceive them depends greatly on the way they are used: their context, their mise-en-scène, the text they are given to embody.*

*Typefaces are a bit like actors. They have a face and a voice of their own, yet the way in which we perceive them depends greatly on the way they are used: their context, their mise-en-scène, the text they are given to embody.*
